23.03.2021

Cinnamon cigarettes in Sri Lanka are severely impacting children and young generation as well as public health.

Cigarette companies around the world follow various strategies to continue the smoking habit and presenting to other nicotine-free smoking markets is one of the key. Introducing cinnamon cigarettes in Sri Lanka is such a strategy and the main reason for this is the rapid decrease in smoking in Sri Lanka. It's a blessing in tobacco companies to make the way for cinnamon cigarettes to continue that campaign. We believe that normalizing and socializing cigarette smoking can be the hidden objectives of these businesses that have been displeased and disgusted in society.

It has been proven that all smokers presented in the name of Ayurveda contain nicotine chemicals, but all other harmful substances, which cause severe health problems. Cinnamon cigarettes also contain asphalt, carbon monoxide, aromatic amine, and other first-category cancer-producing countries have confirmed scientific research. A certified doctor in Ayurvedic smoking is not allowed to continue a smoke drink that is not prescribed for a specific dose of duration to the relevant patient by a normal person without a disease.

While clinical research should be presented on how health-affecting the use of that cigarette before it becomes popular as a cinnamon cigarette industry, cinnamon cigarette advertisers have not yet presented such research confirmations that cinnamon cigarettes are health-friendly. Man's lungs are formed to take in the ordinary air in the environment. So experts have shown that inserting any type of smoke into the lungs causes severe health harm.

Tobacco companies around the world are already working to popularize cannabis usage with cigarettes, and now powerful tobacco companies have bought most of the commercial-level cannabis farming and are also making them popular by misusing the words pharmaceutical or ayurvedic. After the introduced cinnamon cigarette, a cannabis cigarette is also more likely to become popular in the country like this. Hence, the Alcohol and Drug Information Center has stressed that all responsible parties including the government should take action immediately to save the country from this trap that comes from the deer of Ayurveda that the younger generation does not get caught in the habit of smoking balls quickly.
